## EDUCATION

**Bina Nusantara University | 2023 - 2027**

**B.S. in Computer Science, Minors in Artificial Intelligence | GPA: 3.52/4.0**

- Relevant Courses:** Deep Learning, Machine Learning, Program Design Methods, Operating Systems, Database Technology, Software Engineering, Data Structures & Algorithms, and Probability & Statistics

## TECHNICAL SKILLS

**Programming Languages:** Java, Python, JavaScript, TypeScript, C

**Python & Data:** Pandas, Matplotlib, Plotly, pytest, PyTorch, Flask

**Web Development:** Node.js, React.js, NextJS, Vite

**Testing & Automation:** Selenium, Cucumber BDD, Rest Assured, API Testing

**DevOps & Tools:** Git, Docker, Linux/Unix

## RELEVANT EXPERIENCE

**Moladin | Central Jakarta, Indonesia**

**Feb 2026 - Present**

*Software Engineer Intern*

- Developed and tested backend workflows for a risk intelligence platform, supporting scraping, legal-data pipelines, staging validation, and API documentation
- Improved scraper/provider integrations for auction, court, and legal-data sources, including filtering, configuration, PDF download flow, and GCS storage support
- Fixed endpoint/status bugs and supported frontend-backend integration for internal RIS features, improving workflow readiness and reliability
- Collaborated with product and engineering teams on workflow orchestration, LLM-based confidence scoring, debugging, and release validation

## PROJECTS

**CalCountAI | AI Engineer**

**Sep. 2024 - Dec. 2025**

- Developed a computer vision platform for calorie estimation from food images using deep learning-based object detection and image segmentation
- Worked across model development, validation, and system integration to improve AI-driven calorie estimation accuracy
- Built an end-to-end machine learning pipeline to process visual inputs and generate nutritional insights

**Stuggy\_App | Backend Developer**

**Feb. 2025 - Jun. 2025**

- Engineered backend logic and core API infrastructure for collaborative application features
- Built scalable server-side services to support efficient data flow between backend and frontend systems
- Maintained code quality through peer review, Agile collaboration, and troubleshooting

## COURSES & CERTIFICATIONS

**QA Automation Course | JayJay**

**Jul. 2025 - Jul. 2026**

- Built automated web testing scripts using Selenium WebDriver and implemented BDD workflows with Cucumber
- Performed API testing using Rest Assured and managed test execution with TestNG
- Practiced regression testing, scalable test suite development, and validation of complex system integrations
